

RENEWABLE ENERGY SERVICES

Midwest Surveys has the **capacity, project expertise and experience** to provide industry-leading service on your **renewable energy projects**.

In addition to having crews strategically located throughout Western Canada to give you timely service, we also work with our clients to ensure the most effective technologies are used to ensure project success. Our project managers are ready to aid your team in the most preliminary planning and application phases.

We offer knowledge of municipal land use bylaws, local regulations, and solar and wind development guidelines.

Midwest will work with you towards a successful project execution, from application to implementation.
